

UPDATED TOUGHPIX II BATTERY PACK

The **new ToughPIX II Battery Pack** is an evolution of the previous pack and is **reverse compatible** with all previous ToughPIX II Cameras.

OLD

NEW

SUMMARY

The old battery pack has been discontinued

The new battery packs are orange

ToughPIX II shipments starting January 2015 will not be compatible with the old black battery pack

Part numbers will remain unchanged

IMPORTANT INFORMATION

Please note that the special certified battery packs supplied with your CorDEX Instrument have different characteristics to the standard batteries used with domestic electrical devices.

The choice of battery chemicals is limited and they incorporate permanent electronic protection circuitry to achieve hazardous area certification. This has an effect on battery life both in use and in storage.

- Batteries will lose their charge quite rapidly whether attached to the camera or not.
- Batteries should always be charged immediately before use for maximum performance.
- Batteries will degrade more rapidly than standard batteries and must be replaced regularly to maintain camera performance.
- Low temperatures will seriously affect battery performance.
