

# SAFESITE® Multi-Threat Detection System

The SAFESITE Multi-Threat Detection System simultaneously monitors and wirelessly communicates six potential threats: CWAs, VOCs, TICs, gamma radiation, combustible gas and oxygen deficiency.

The SAFESITE System combines state-of-the-art detection technology with advanced wireless communication capabilities to provide superior preventative and counter-measure solutions for:

- ➔ Homeland Security
- ➔ Emergency Response
- ➔ Public Events
- ➔ Building Protection
- ➔ Mass Transportation Centers
- ➔ Perimeter Monitoring
- ➔ Hazardous Response
- ➔ Port Surveillance
- ➔ Confined Space Monitoring

SAFESITE® System components consist of the SAFEMTX™ Multi-Threat Detector, the SAFECOM™ Command Center and the SAFECOM™ Belt-Bridge with Sirius wireless interface. The system can be installed permanently (wired or wireless) for continual monitoring or deployed as a portable system.

The SAFEMTX Multi-Threat Detector utilizes multi-sensing technologies to detect up to six potential threats; helping first responders, law enforcement

and government agents reduce the risk of exposure and facilitate consequence management.

The SAFEMTX Detector also offers GPS location technology, pumped flow, horn, beacon, interchangeable smart sensors for maximum flexibility, a display lock-out panel which hides the display during monitoring, and internal diagnostics to identify signal strength during system deployment. Power options allow for lithium ion or alkaline batteries, as well as AC Power and 12 VDC vehicle connection.

Threat	Technology	Benefit
Chemical warfare agents	Surface acoustic wave (SAW)	Low false positives and false alarms, differentiates nerve & blister agents
Gamma radiation	Cadmium zinc telluride (CZT)	Sensitive with adjustable threshold and 2 ranges. (0-100 mR/hr, 0.1 mR/hr resolution & 0-1000 mR/hr, 1 mR/hr resolution)
Volatile organic compounds	Photo-ionization (PID)	10.6 eV lamp provides ppm readings for broadband toxics and VOC detection
Toxic industrial chemicals	Electro-chemical	Detects for many specific toxic gases such as chlorine, ammonia, hydrogen cyanide and hydrogen chloride
Oxygen deficiency/enrichment	Electro-chemical	Oxygen monitoring for confined space
Combustible gas	Catalytic bead	Wide range detection for hydrocarbons

SAFEMTX Multi-Threat Detector

State-of-the-art LCD display provides all six threat readings, LEDs indicate detector status, and keypad allows for alarm acknowledge, sensor calibration, and system setting configuration.

# SAFECITY

The **SAFECOM™** Command Center receives mission-critical information from the **SAFEMTX™** Detectors and permits this crucial and wide-ranging data to be converted quickly into practical information for rapid decision-making through an uncomplicated graphical user interface. The **SAFECOM** Command Center can manage up to four systems with 16 **SAFEMTX** Detectors per system, integrating **SAFEMTX** data, including:

- Gas readings
- Relative CWA threat level
- Radiation dose rate
- Alarm status
- GPS location
- Battery run time
- RF signal strength
- Fault conditions
- **SAFEMTX** min, max, and average values

Through the **SAFECOM** Command Center, alarms are identified with both visual and audible alarms. Alarms can then be acknowledged and silenced, detectors can be enabled and disabled, event logs and event log history can be viewed, plus units can be customized to suit the specific deployment scenario.

The **SAFECOM** Command Center maps **SAFEMTX** Detectors through GPS technology, specific address inputs or “click-and-dragging” icons onto images.

The **SAFECOM** Command Center is also a TCP/IP hub, allowing all information to be placed on a network for remote viewing.

## Wireless Technology

The **SAFESITE®** System provides up to two miles of wireless communication between any **SAFEMTX** Detector, **SAFECONNECT** Belt-Bridge and **SAFECOM** Command Center.

**SAFECONFIG™** Software works with the **SAFECOM** Command Center or **SAFECONNECT** Belt-Bridge, enabling configuration of any **SAFEMTX** Detector as a repeater. This added capability maximizes deployment range and ensures maximum signal strength and reliable deployment without the need to move units.

## Components Work Together

The **Sirius** Wireless Interface features an IR link which gathers the information from the **Sirius** Multigas Detector (PID, CO, H<sub>2</sub>S, O<sub>2</sub> and combustible gases) and then sends the information to the **SAFECONNECT** Belt-Bridge via Bluetooth technology.

The **SAFECONNECT** Belt-Bridge converts the signal in from the **Sirius** Wireless Interface and transmits the information plus GPS location back to the **SAFECOM** Command Center via a 1 watt, spread spectrum, frequency hopping, 900 MHz radio.

The **SAFECOM** Command Center receives the 900 MHz signal from the **SAFECONNECT** Belt-Bridge and converts it to practical information for rapid decision making. The **SAFESITE** System can display simultaneous information from the **SAFEMTX™** Detectors and the **Sirius** Multigas Detector for complete coverage.

PC Connection

- 1 Threat Readings** – scrolling readings of up to 16 MTX Detectors per channel. Unit is identified by large icon to the left of the readings. In alarm condition, display snaps to unit in alarm.
- 2 MTX Icons** – identify number of units enabled in current network. Users may view specific unit reading by double-clicking on icon.
- 3 Map** – option for map view or uploaded image view.
- 4 Signal Strength** – communication status from SAFEMTX™ Detector to SAFECOM™ Command Center.
- 5 Power** – status of battery life of SAFEMTX Detectors.
- 6 System Status** – alerts user to alarm, warning or fault within a particular system.
- 7 Action Buttons** – allow user to select address, cycle units, acknowledge alarms and enable or disable units from the system.
